

Bayswater to Retain Dr. Robert Rich to Sell Reno Creek Uranium Production

Vancouver, BC, September 15, 2009 — Bayswater Uranium Corporation (TSX-V: [BAY](#)), (OTC: [BYSWF](#)) is pleased to announce that, subject to closing of the transaction with Strathmore Resources (US) Ltd and American Uranium Corp. (OTC: ACUC) as announced August 24, 2009 to acquire a 100% interest in the Reno Creek Uranium Project, Wyoming, American Uranium and Bayswater have agreed, subject to finalization of terms, to enter into a consultancy agreement whereby American Uranium will provide the exclusive services of Dr. Robert A. Rich to assist Bayswater in the marketing and selling of uranium concentrates produced from the Company's Reno Creek Project in northeast Wyoming.

Bayswater's President George Leary said "We are extremely pleased to have obtained Bob Rich's services to assist in the sale of Bayswater's uranium production. Bob is a well-known uranium industry veteran who successfully marketed Olympic Dam uranium in Canada and the USA for a number of years until 2005."

Dr. Robert Rich said, "It's especially gratifying for me to be continuing work with the Reno Creek Project, which I believe is one of the best undeveloped ISR uranium deposits in the USA and destined to be among the next wave of significant US uranium producers."

Dr. Robert Rich holds a PhD in Geological Sciences from Harvard University where he began his uranium studies working on genetic and exploration models for the high-grade uranium deposits in Canada and Australia which later became known as the "unconformity-type". He then spent 9 years at the Yankee Group of nuclear utility companies in New England—first as a geologist evaluating potential investments in uranium exploration/development, and then as Manager of Nuclear Materials responsible for negotiating and purchasing uranium, and conversion and enrichment services for several reactors.

Following his nuclear utility experience, Dr. Rich was employed as Executive VP of the Washington D.C. consulting and nuclear transport firm Edlow International Company. In this position, he gained much international industry exposure. While with Edlow, Dr. Rich was responsible for marketing British Nuclear Fuels' conversion services in the United States.

Since 1988, Dr. Rich's consulting firm, Rich Associates, Inc. has provided uranium marketing services for the Olympic Dam mine in Australia, the world's largest uranium deposit owned by BHP Billiton (NYSE: BHP), diverse nuclear consulting services for Sumitomo Corporation, consulting assignments for a number of nuclear utilities, and publication of uranium market reports covering supply-demand analysis and price forecasting.

Since early 2007, Dr. Rich has held the position of President and CEO of American Uranium Corporation, a Denver-based company focused on uranium exploration and consulting.

About Bayswater Uranium Corporation - The Super Junior Uranium Company™

Bayswater Uranium Corporation is an international uranium exploration and development company. The Company owns several advanced uranium properties in the United States with significant historical resources that may be amenable to ISR and/or conventional mining. As well, Bayswater is the only uranium company to have major landholdings in each of Canada's most important producing and exploration regions - the Athabasca Basin, the Central Mineral Belt, and the Thelon Basin. Bayswater combines a balanced portfolio of advanced and exploration projects with the uranium expertise of its technical and managerial teams. To capitalize on current market conditions and strong growth of the nuclear industry, the Company is pursuing acquisition opportunities of advanced-stage uranium projects with near-term production potential. Bayswater's vision is to build a major international uranium company. Shares of the Company are listed on the TSX Venture Exchange under the symbol "BAY".
